Daicel Corporation

## **Daicel Partners with WIPO GREEN in an International Platform for Environment Technology Exchange.**

April 15, 2020, Daicel Corporation (Head office: Kita-ku, Osaka, President & CEO: Yoshimi Ogawa, hereinafter: "Daicel") announced that it had become a Partner of WIPO GREEN's International Platform for Environment Technology Exchange whose platform is operated by the World Intellectual Property Organization (WIPO).

Daicel has been a user of WIPO Green by registering its technology but by joining as a Partner, Daicel will now be able to freely communicate with the other partners and raise the possibility of successfully finding matches in technologies.

Daicel has already begun listing its environmental technologies in WIPO Green and will continue to do so. Furthermore, Daicel will consider accelerating the use of its environmental technologies by collaborative creation and/or technology exchange in open innovation activities.

Daicel Group will continue to develop environmental products and technologies and contribute to achieving a more sustainable society as stated in the Sustainable Development Goals (SDGs).

### About WIPO GREEN

WIPO GREEN, established by WIPO in 2013, is a database and network to connect environmental patent holders and those who seek green technologies with the aim of promoting the transfer of environmental technologies. Under the WIPO GREEN scheme, patent holders list their environmental patents and those who seek green technologies enlist their needs to find a match and provide an opportunity to negotiate. More than 1,400 individuals and organizations in over 110 countries have participated and over 3,600 patents and needs have been

registered, resulting in more than 600 successful matches. Once listed on WIPO GREEN, patents are expected to receive international recognition and find more effective applications.

Reference material

Daicel's patent recorded on WIPO Green

1. Lightweight and high mechanical strength plastic reinforced by rayon fiber
  - i. Fiber-reinforced resin composition (USP 9096750 )
2. Chromic acid free plating
  - i. Plating resin molded article and process for producing the same (USP7645370)
3. Catalyst for chemical reaction under mild condition
  - i. Catalyst comprised of n-substituted cyclic imides and processes for preparing organic compounds with the catalyst (USP 7084090 )
  - ii. Catalyst comprising cyclic acylurea compounds and processes for production organic compounds with the same (USP7091342)
  - iii. Process for producing cyclic N-hydroxy imide compounds (USP7582774)
  - iv. Method for producing oxidation product of cycloalkane (USP7834217 )
